## **\*Your Server**

As defined by a predetermined location for your files to be accessed by the world wide web. Most Internet Service Providers have an amount of web space included in the price of their service but that leaves you with a web site URL of [www.yourisp.com/yourlogin](http://www.yourisp.com/yourlogin).

Other arrangements can be made to house a domain name with them but this is an additional charge sent directly to you from the hosting server. This is done so that the server where your site is being hosted has nothing to do but keep your site up and running.

## **\*\*Site Maintenance**

Every Web Site on the net needs to be updated periodically if for no other reason than to keep it from seeming like a relic. If dates, news, or inventory items are listed on the site they will more-than-likely need changing more often than pictures, but pictures are also frequently updated.

At CyberObjex, we feel that \$150 a month is a fair charge for this type of update being performed every month (+ image processing). The charge would cover the first 2 hours in any given month. Additional time would be billed at the standard \$75/hour.
